

PRANAV BIBHISHAN MANE

+91 9325112083 | pranavmane103@gmail.com | Pune, Maharashtra, India

PROFESSIONAL SUMMARY

Computer Engineering graduate with hands-on project experience in Python backend development, FastAPI, REST APIs, PostgreSQL, SQL, authentication, testing, and Git/GitHub. Seeking an entry-level Python Backend Developer / Software Engineer role to build on this project foundation and grow into production-level backend work. Comfortable with Object-Oriented Programming, Data Structures & Algorithms, and database design fundamentals, with strong problem-solving ability and a consistent habit of continuous learning.

TECHNICAL SKILLS

Programming Languages: Python, SQL, Java (Basic)

Backend: FastAPI, Django, REST APIs, JSON, HTTP, JWT Authentication, Backend Development

Databases: PostgreSQL, MySQL

Core Computer Science: Object-Oriented Programming (OOP), Data Structures & Algorithms, DBMS, Operating Systems (Basic), Computer Networks (Basic)

Tools & Version Control: Git, GitHub, Postman, VS Code

Currently Learning: Advanced Python Backend Development, API Design, PostgreSQL

EDUCATION

B.E. Computer Engineering CGPA: 7.6 | Sep 2022 – Jun 2026

Keystone School of Engineering, Pune

XII (HSC) 62% | Mar 2022

R.R. Shinde Jr. College, Pune

X (SSC) 89% | Mar 2020

Adarsh High School, Pune

PROJECTS

Hybrid On-Chain & Off-Chain Disaster Relief Management System | Final Year Project — React.js, Node.js, Express.js, MongoDB, Hyperledger Fabric, REST APIs

- Architected a disaster-relief platform spanning Administrator, Donor, and Beneficiary roles to improve transparency and accountability in aid distribution.
- Implemented role-based dashboards secured with JWT-based authentication and authorization flows.
- Engineered a Household ID (HH-ID) verification scheme to prevent duplicate beneficiary registrations and fraudulent aid claims.
- Built a partial-allocation engine to split donations across multiple beneficiaries while keeping fund reconciliation records accurate.
- Integrated Hyperledger Fabric to record aid allocations and beneficiary transactions as immutable, on-chain audit trails.
- Developed a proof-of-delivery upload and verification workflow so donors could track a contribution from submission to delivery confirmation.

ShopHub — Full-Stack E-Commerce Platform | Python, Django, Django REST Framework, React, TypeScript, PostgreSQL, JWT

- Developed a full-stack e-commerce platform with a Django REST API and a responsive React/TypeScript frontend, supporting customer shopping and role-based admin workflows.
- Implemented JWT authentication and role-based authorization, product catalog with search/filtering, cart, wishlist, coupons, checkout, orders, notifications, and admin dashboard for products, orders, inventory, shipments, and reviews.
- Added automated testing across the stack, with 300 Django tests and 24 frontend tests passing and a verified production frontend build.

[GitHub](#)

Smart Civic Response System | React.js, FastAPI, PostgreSQL, Python, JWT, REST API

- Built a full-stack civic complaint management platform with Citizen, Authority, and Admin role-based workflows using React.js and FastAPI.
- Implemented JWT authentication, complaint creation, automatic authority assignment, status tracking, filtering, and complaint history through REST APIs.
- Developed and tested the application with 38 passing backend tests, frontend lint/build validation, and integrated Git-based project management.

CERTIFICATIONS

- Database Management Systems — NPTEL (Jul 2024)
- HTML, CSS & JavaScript — Simplilearn (Feb 2024)

TRAINING & SEMINARS

- National-Level Short-Term Training Program — Java Full Stack Development (2024): Exposure to full-stack development concepts, including frontend basics with React.js and backend fundamentals with Java.
